## 2 Introduction

This manual describes how to design a DCS 6000 Conference system using the SW 6000 Software Packages, how to install the SW 6000 Software Packages and how to setup the system for running the first time.

This document does however not describe the use of the applications like i.e. the CUA and CAA in details. Please consult the relevant manuals for this.

### 2.1 Minimum Requirements

The minimum requirements for a PC running an application are:

- Min. Pentium 1.5GHz
- Min. 2 GB RAM
- Min. 10GB HD
- CD-ROM drive
- USB port if CP 6001 Chip Card Programmer is to be used
- TCP/IP network connection
- VGA screen. Please refer to the User Manuals for the SW 6000 applications for information on minimum resolution.

### 2.2 Compatibility

**The SW 6000 Software version 6.2.xx is only compatible with DCS 6000 Firmware Release 7.5.0 and higher.**

If the DCS 6000 system is an earlier release, an upgrade of the system is needed. Please consult your DIS Partner for information about updating your system.

### 2.3 Supported Operating Systems

SW 6000 Software v6.2 support standard installations\* of the following operating systems

- Windows 7 (32 bit and 64 bit)
- Windows Server 2008,, 2008 R2 and 2012 R2
- WIN 8.1 x86 Enterprise/Professional/Standard
- WIN 8.1 x64 Enterprise/Professional/Standard

**Important:** Windows XP operating system is NOT supported

\*Please notice that cloned operating systems are not considered a standard installation. Clones may cause problems with duplicate SIDs causing the MSDTC to fail. Clones should therefore be used with caution and only by experienced IT people.

### 2.4 SW 6000 CD-ROM & Web-site

The SW 6000 Software, Prerequisites and User Manuals are available on [www.dis.cc](http://www.dis.cc) after login in as a Partner.

### 2.5 User Manuals

The use of the applications is found in the following manuals:

- User manual CAA Conference Administration Application
- User manual CUA Conference User Application
- User manual CDA Conference Display Application
- User manual ECU External Control Application

## 3 System design

Prior to installing the software the system has to be designed, as the SW 6000 Software Package gives options for all in-between a small installation with one PC and a large installation with more than 1000 PCs.

### 3.1.1 Applications

The SW 6000 Software Packages consists of 4 main applications

- **CUA - Conference User Application**
- **CAA - Conference Administrator Application**
- **CDA - Conference Display Application**
- **ECA - External Control Application**

and the interface application for establishing the connection to the CU 6005/6011/6105/6110:

- **CUI - CU Interface**

An application for backing up data and restore data is also part of the package:

- **SW6000 Backup Utility**

The conference data (Delegate names, Conference names etc.) is stored in one of the following database installations:

- **SQL - Microsoft SQL 2005 server Express**
- **SQL - Microsoft SQL 2008 server Express**
- **SQL - Microsoft SQL 2000 server, Enterprise Edition or Standard Edition**
- **SQL - Microsoft SQL 2005 server, Enterprise Edition or Standard Edition**

- **SQL - Microsoft SQL 2008 server, Enterprise Edition or Standard Edition**

The SQL - Microsoft SQL 2008 server Express is delivered as part of the SW 6000 package

### 3.2 Installation design

The CDA, CUI, CUA, CAA and ECA applications can all be installed on the same PC or all on separate PCs, but this is normal procedure.

**For performance reason the CUI should be installed at the same PC/Server as the database.**

Before installing the applications the design of the system has to be decided.

The following schematics are showing various system designs with SW 6000 applications. The abbreviations shown above are used in the schematics:

#### 3.2.1 One PC System Design

##### 3.2.1.1 Chairman or Technician control

Design characteristics	<p>This design is used, where no control is needed from the 'Meeting Room'. All control of the system and administration is done on the 'Technician' PC.</p> <p>This design is used, where no technician is needed and where the control and administration can be done from the PC placed in the 'Meeting Room'.</p>
------------------------	---

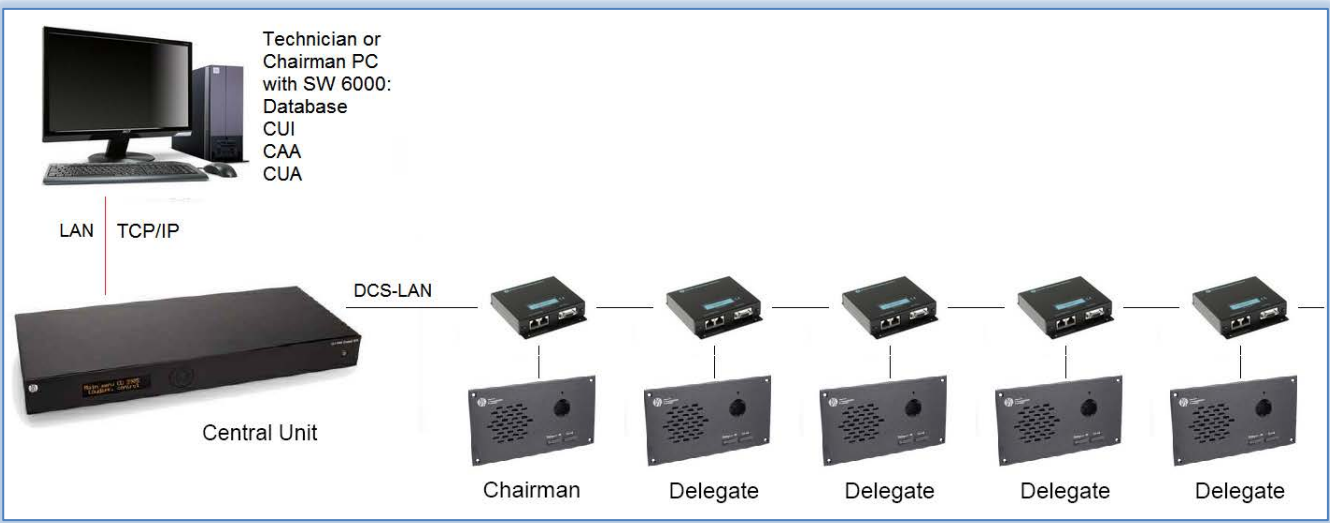

Figure 3.2-A Standard one PC installation

3.2.2 Installation with Multiple PC's

3.2.2.1 Chairman & multiple Delegates

Design characteristics	This design is used, where some or all of the Delegates have access to a PC. The control of the system can be done from any PC with CUA installed where the User Type gives control privileges' i.e. the 'Technician' or the 'Chairman'. Administration is done on the 'Technician' PC or on the 'Administration' PC.
------------------------	---

Reservations	Running the CUI on a Windows 7 operating system is only suitable for systems with up to 10 users. With more than 10 users, the CUI must run on a Windows Server.  For systems with less than 25 users, the SQL Server Express Edition can be used. For systems with more than 25 users, it is recommended to use an SQL Server version for better performance.  SQL Servers require Microsoft licenses.
--------------	---

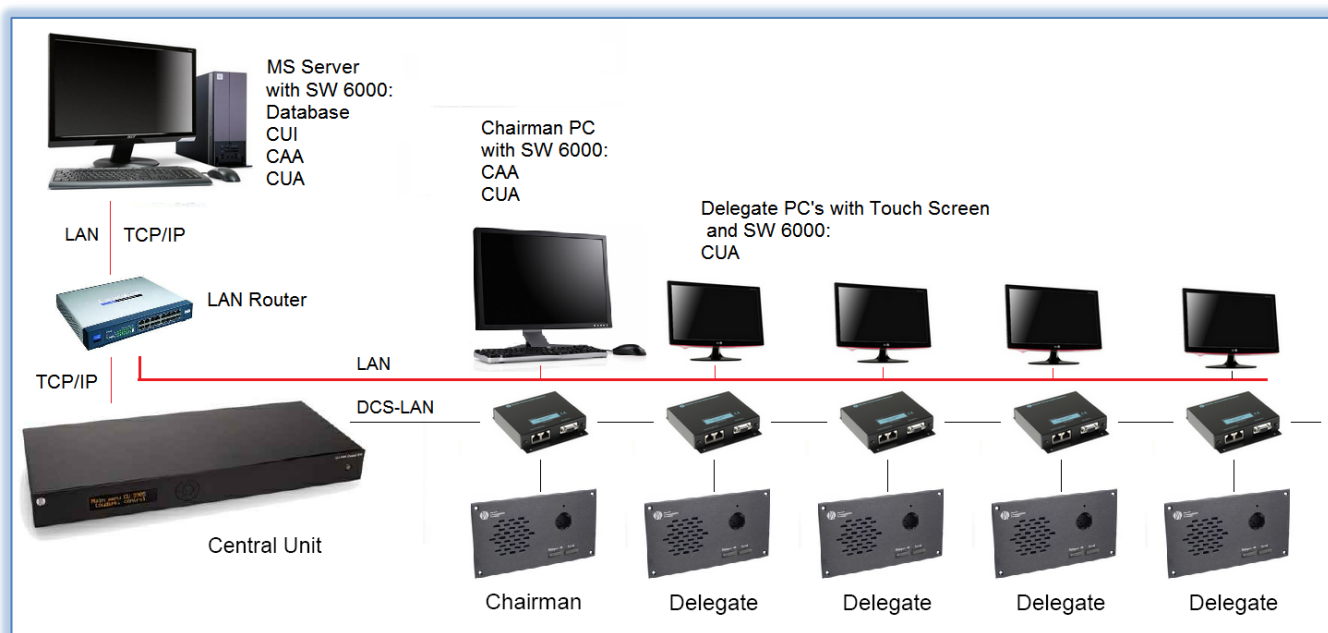

Figure 3.2-B Installation with multiple PC's

3.2.2.2 Chairman & Technician control including Display and External control

Design characteristics	<p>This design is used, where a ‘Chairman’ is either controlling the system or monitoring the system and where a ‘Technician’ can take over the control of the system if needed. Administration is done on the ‘Technician’ PC.</p>
Reservations	<p>Running the CUI on a Windows 7 operating system is only suitable for systems with up to 10 users. With more than 10 users, the CUI must run on a Windows Server.</p> <p>For systems with less than 25 users, the SQL Server Express Edition can be used. For systems with more than 25 users, it is recommended to use an SQL Server version for better performance.</p> <p>SQL Servers require Microsoft licenses.</p>

Figure 3.2-C Installation with multiple PC's

### 3.2.2.3 Chairman & Delegates control >10 PCs

Design characteristics	This design is used, where some or all of the Delegates have access to a PC. The control of the system can be done from any PC with CUA installed where the User Type gives control privileges' i.e. the 'Technician' or the 'Chairman'. Administration is done on the 'Technician' PC or on the two 'Administration' PCs.
------------------------	--

#### Reservations

Running the CUI on a Windows 7 operating system is only suitable for systems with up to 10 users. With more than 10 users, the CUI must run on a Windows Server.

For systems with less than 25 users, the SQL Server Express Edition can be used. For systems with more than 25 users, it is recommended to use an SQL Server version for better performance.

SQL Servers require Microsoft licenses.

Figure 3.2-D Installation with multiple PC's

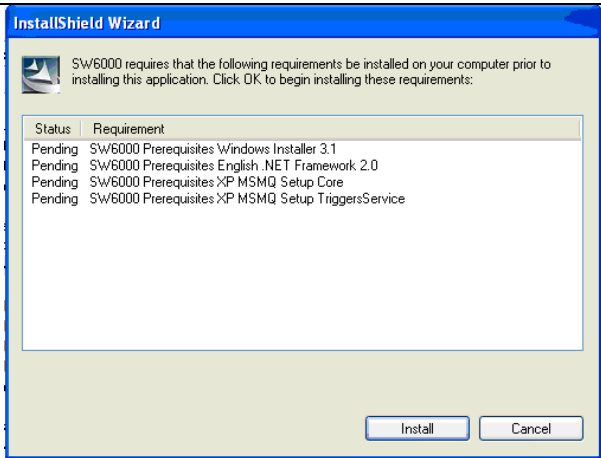

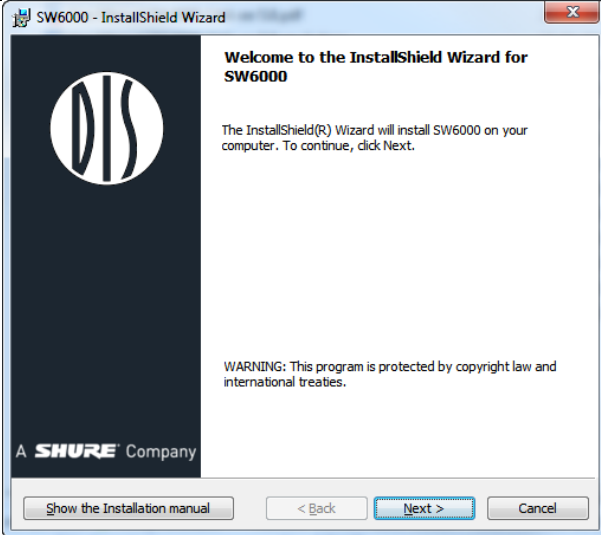

## 4 Software Installation

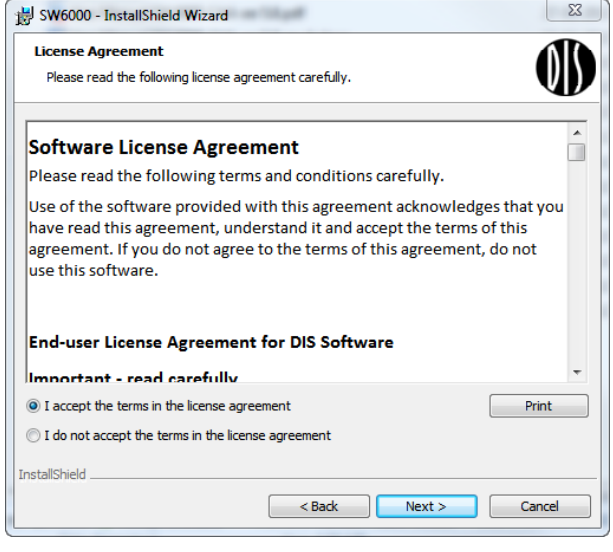

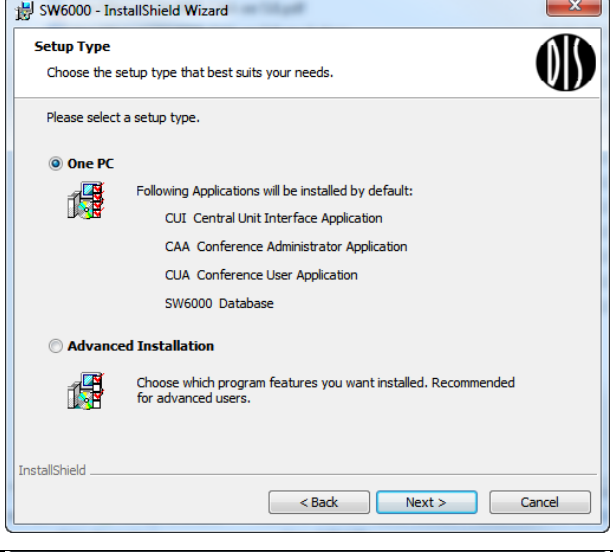

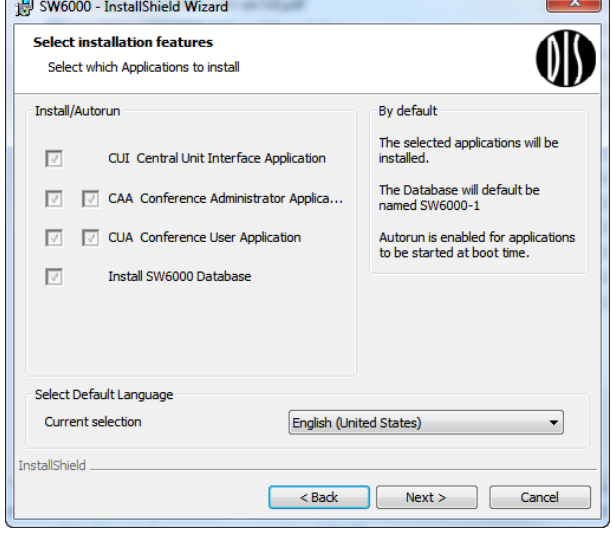

### 4.1 'One PC' Installation or first installation in a multi-PC system

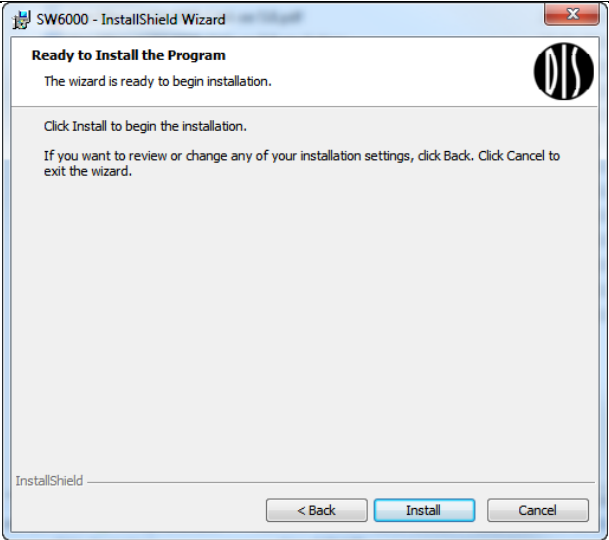

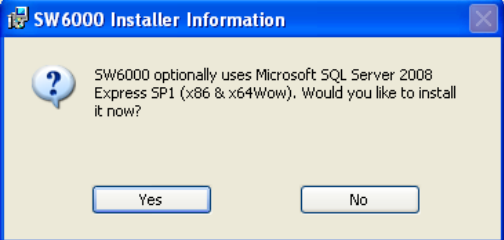

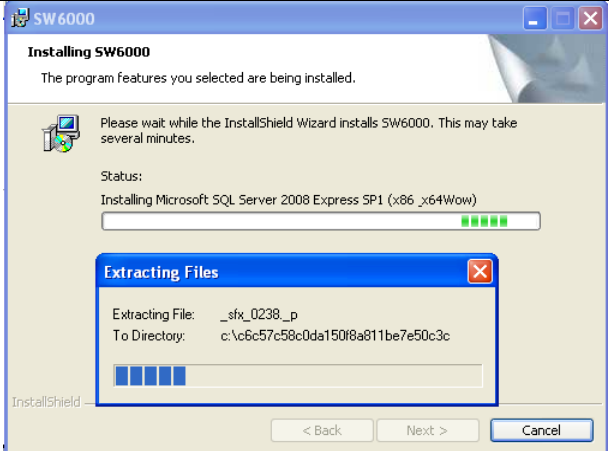

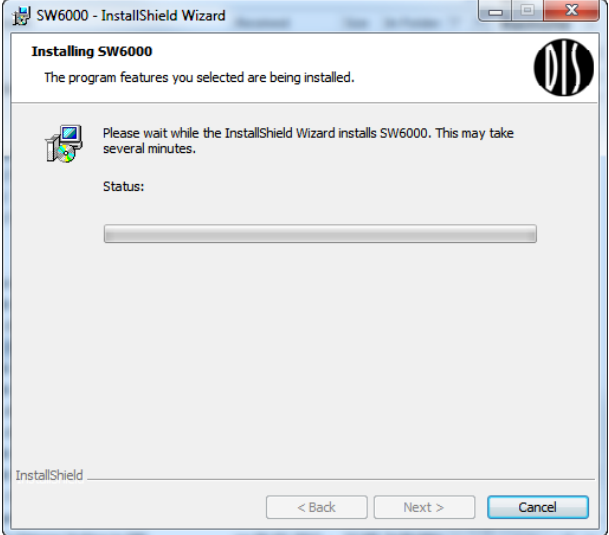

The following installation procedure describes how to install the SW 6000 Software on a PC in a design as described in the section 'One PC System Design'.

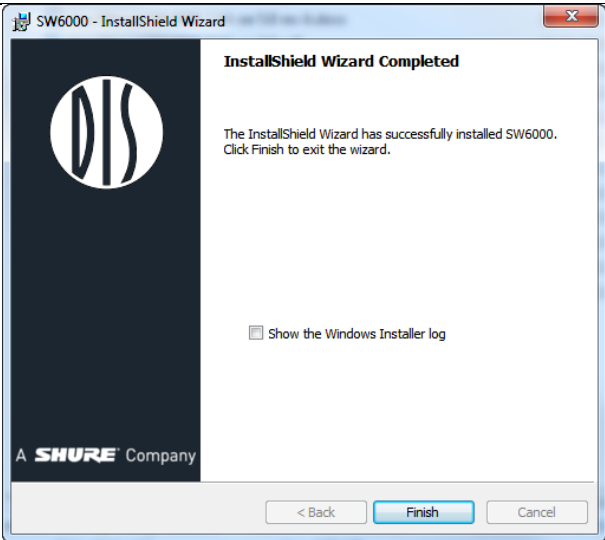

**Important:** This installation is also recommended to use to install on the Server/PC, where the database is to be placed in a multi-PC system.

#### 4.1.1 Installing SW 6000

1.	<p>Insert the CD with the 'SW 6000' Software in the CD-ROM drive in the PC.</p> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Important:</b> If the software is downloaded from the DIS web site the folder 'SW 6000 Installation' must be copied to C:\ before the installation is started and the installation must be started from the copied folder (C:\SW 6000</p> </div> <p>Click on the Setup.exe in the 'SW 6000 #Installation' folder on the CD.</p> <p>'The install Shield Wizard' will automatically show a list of 'Prerequisites' required for running SW 6000.</p> <p>Click 'Install' for all required applications</p>	
2.	<p>After installing the 'Prerequisites', the installation wizard continues by installing the SW 6000 Applications</p> <p>Click 'Next'</p>	

3.	Accept the License Conditions and click 'Next'	 <p>The screenshot shows the 'License Agreement' window of the SW6000 - InstallShield Wizard. It contains a scrollable text area with the 'Software License Agreement' terms. Below the text, there are two radio buttons: 'I accept the terms in the license agreement' (which is selected) and 'I do not accept the terms in the license agreement'. There is a 'Print' button and 'Back', 'Next &gt;', and 'Cancel' navigation buttons at the bottom.</p>
4.	<p>The installation gives two choices: 'One PC' installation and 'Advanced Installation'. Select 'One PC' and click 'Next'</p>	 <p>The screenshot shows the 'Setup Type' window. It asks the user to 'Choose the setup type that best suits your needs.' There are two options: 'One PC' (selected) and 'Advanced Installation'. The 'One PC' option lists applications to be installed by default: CUI Central Unit Interface Application, CAA Conference Administrator Application, CUA Conference User Application, and SW6000 Database. The 'Advanced Installation' option suggests choosing which program features to install. Navigation buttons are at the bottom.</p>
5.	<p>Select default language.</p> <div data-bbox="225 1384 748 1485" style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Important:</b> The default language can only be selected during installation and cannot be changed after the installation is completed.</p> </div> <p>Click 'Next'</p> <p>The 'CAA', 'CUI', 'CUA' and 'SW 6000' will then be installed.</p> <p>The applications will start-up automatically.</p>	 <p>The screenshot shows the 'Select installation features' window. It has two columns: 'Install/Autorun' and 'By default'. In the 'Install/Autorun' column, four items are checked: CUI Central Unit Interface Application, CAA Conference Administrator Application, CUA Conference User Application, and Install SW6000 Database. The 'By default' column contains text explaining that the selected applications will be installed, the database will be named SW6000-1, and Autorun is enabled. At the bottom, there is a 'Select Default Language' section with a dropdown menu currently set to 'English (United States)'. Navigation buttons are at the bottom.</p>

6.	Click Install	 <p>The wizard is ready to begin installation.</p> <p>Click Install to begin the installation.</p> <p>If you want to review or change any of your installation settings, click Back. Click Cancel to exit the wizard.</p> <p>Buttons: &lt; Back, Install, Cancel</p>
7.	<p>If no SQL server is installed previously you will be asked to confirm if you want the SQL server 2008 Express to be installed.</p> <p>Click 'Yes'</p>	 <p>SW6000 optionally uses Microsoft SQL Server 2008 Express SP1 (x86 &amp; x64Wow). Would you like to install it now?</p> <p>Buttons: Yes, No</p>
8.	The SQL 2008 Server Express is now being installed.	 <p>The program features you selected are being installed.</p> <p>Please wait while the InstallShield Wizard installs SW6000. This may take several minutes.</p> <p>Status: Installing Microsoft SQL Server 2008 Express SP1 (x86_x64Wow)</p> <p>Extracting Files dialog: Extracting File: _sfx_0238_p To Directory: c:\c6c57c58c0da150f8a811be7e50c3c</p> <p>Buttons: &lt; Back, Next &gt;, Cancel</p>
9.	The software is installed	 <p>The program features you selected are being installed.</p> <p>Please wait while the InstallShield Wizard installs SW6000. This may take several minutes.</p> <p>Status:</p> <p>Buttons: &lt; Back, Next &gt;, Cancel</p>

10.	<p>Click 'Finish' to complete the installation.</p> <p>Shortcuts to the application have been created at the 'Desktop', in the 'Start menu' and in the 'Startup folder' for automatic startup of the applications.</p>	
-----	--	--

## 4.2 'Advanced' Installation (multiple PC's)

The following installation procedure describes how to install the SW 6000 Software on multiple PC's in designs as described in the section 'Installation with Multiple PC's'.

### 4.2.1 Preparations before installation

Before you start the installation of the SW 6000 Software Package you must ensure that the following preparations have been done:

- Ensure that you have LAN TCP/IP connection at the PC's. Assign a permanent or automatic IP address
- If you use more than one PC in the system Windows 7/Server 2012 please note that there are some built in Windows errors, which have to be corrected before running SW 6000. See sub-section '4.2.2 Windows Corrections'.
- Install touch screen driver if using touch screen for the CUA
- Disable the firewall as default. If it is necessary to enable the firewall please follow the instructions in the sections '4.2.3 Additional Firewall settings' and '4.2.4 Message Queuing settings'.

### 4.2.2 Windows Corrections

If you use more than one PC in the system and are using Windows 7 or Server 2008/12 please note that there are some built in Windows errors, which have to be corrected before running SW 6000. The next sections show the corrections to be made

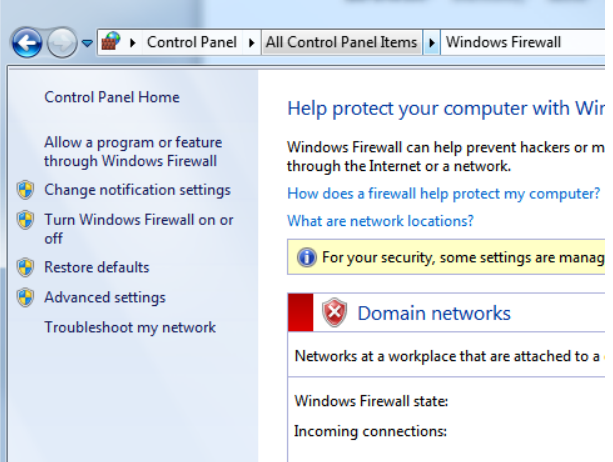

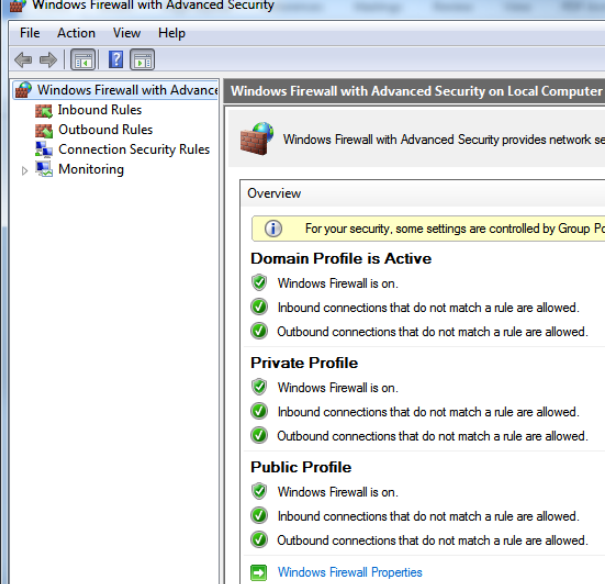

1. Enable MSDTC to allow the network transaction. To do this, follow these steps:
  - a. Click **Start**.
  - b. In the **Search programs and files** text box, type **dcomcnfg.exe**, and then click **Enter**.
  - c. In the **Component Services** window, expand **Component Services**, expand **Computers**, expand **My Computer**, and then expand **Distributed Transaction Coordinator**.
  - d. Right-click **Local DTC** and click **Properties**.
  - e. In the **Local DTC Properties** dialog box,

click on **Security** tab.

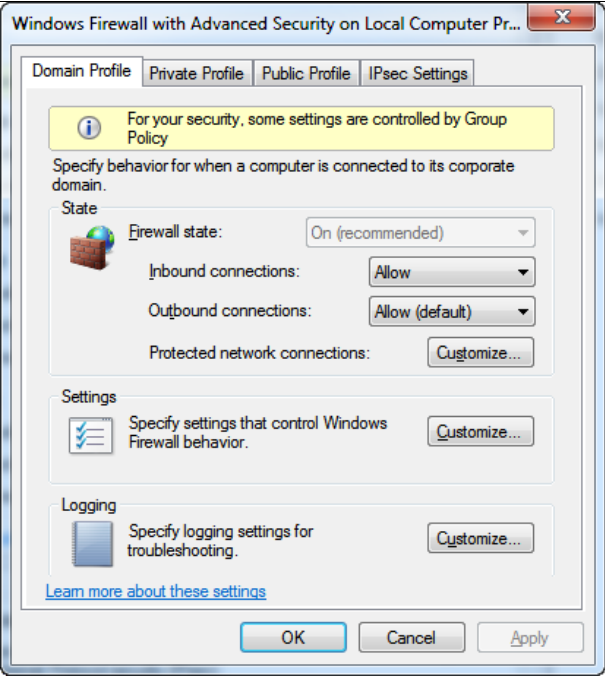

- f. Click to select the **Network DTC Access** check box.
  - g. Under the **Transaction Manager Communication** group, click to select the **Allow Inbound** check box. To allow the distributed transaction to run on this computer from a remote computer.
  - h. Under the **Transaction Manager Communication** group, click to select the **Allow Outbound** check box. To allow the distributed transaction to run on a remote computer from this computer.
  - i. Under the **Transaction Manager Communication** group, click to select the **No Authentication Required** option.
  - j. In the **Local DTC Properties** dialog box, click **OK**.
2. Configure Windows Firewall to include the MSDTC program as an exception. To do this, follow these steps:
    - a. Click **Start**.
    - b. In the **Search programs and files** text box, type **Firewall.cpl**, and then click **Enter**
    - c. In **Windows Firewall** dialog box, click **Allow a program or feature through Windows Firewall**.
    - d. In the **Allowed Programs** dialog box, click **Allow another Program....** If button is not enabled then click **Change Settings** first
    - e. In the **Add a Program** dialog box, click the **Browse** button, and then locate the Msdtc.exe file. By default, the file is stored in the **<Installation drive>:\Windows\System32** folder.
    - f. In the **Add a Program** dialog box, click **Add**.
    - g. In the **Allowed Programs** dialog box, Select **Microsoft Distributed Transaction Coordinator Service** and check all check box's
    - h. In the **Allowed Programs** dialog box, click **OK**.

### 4.2.3 Additional Firewall settings

If the system shall run with firewall active the following settings must be done on all PC's in the system.

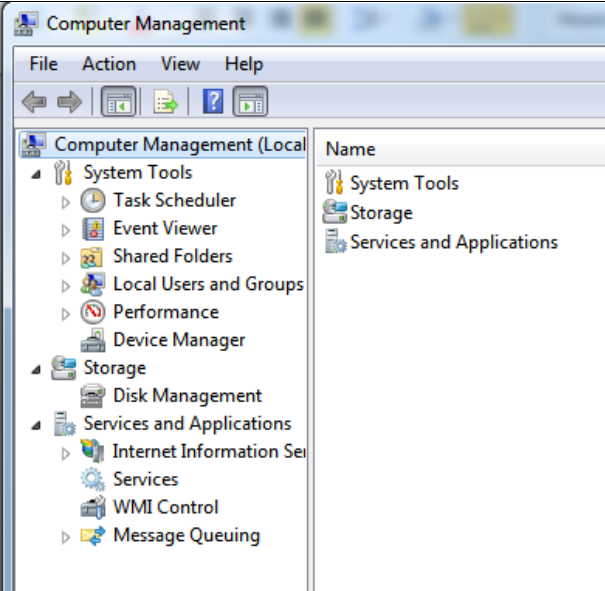

11.	<p>Open 'Control Panel\All Control Panel Items\Windows Firewall'.</p> <p>Select 'Advanced Settings'</p>	 <p>The screenshot shows the Windows Firewall Control Panel window. The breadcrumb path at the top is 'Control Panel &gt; All Control Panel Items &gt; Windows Firewall'. The left sidebar contains links: 'Allow a program or feature through Windows Firewall', 'Change notification settings', 'Turn Windows Firewall on or off', 'Restore defaults', 'Advanced settings', and 'Troubleshoot my network'. The main area has a heading 'Help protect your computer with Windows Firewall' and a message: 'Windows Firewall can help prevent hackers or malware from getting through the Internet or a network.' Below this are links for 'How does a firewall help protect my computer?' and 'What are network locations?'. A yellow warning box states: 'For your security, some settings are managed by your organization.' Below that is a section for 'Domain networks' with a red shield icon and text: 'Networks at a workplace that are attached to a corporate network.' At the bottom, it shows 'Windows Firewall state:' and 'Incoming connections:'.</p>
12.	<p>Select 'Windows Firewall Properties'</p>	 <p>The screenshot shows the 'Windows Firewall with Advanced Security' window. The left sidebar lists 'Inbound Rules', 'Outbound Rules', 'Connection Security Rules', and 'Monitoring'. The main area is titled 'Windows Firewall with Advanced Security on Local Computer' and shows an 'Overview' section. A yellow warning box states: 'For your security, some settings are controlled by Group Policy.' Below this, it indicates 'Domain Profile is Active' and lists three status items, each with a green checkmark: 'Windows Firewall is on.', 'Inbound connections that do not match a rule are allowed.', and 'Outbound connections that do not match a rule are allowed.' Below this, it shows 'Private Profile' and 'Public Profile', each with the same three status items. At the bottom, there is a link for 'Windows Firewall Properties'.</p>

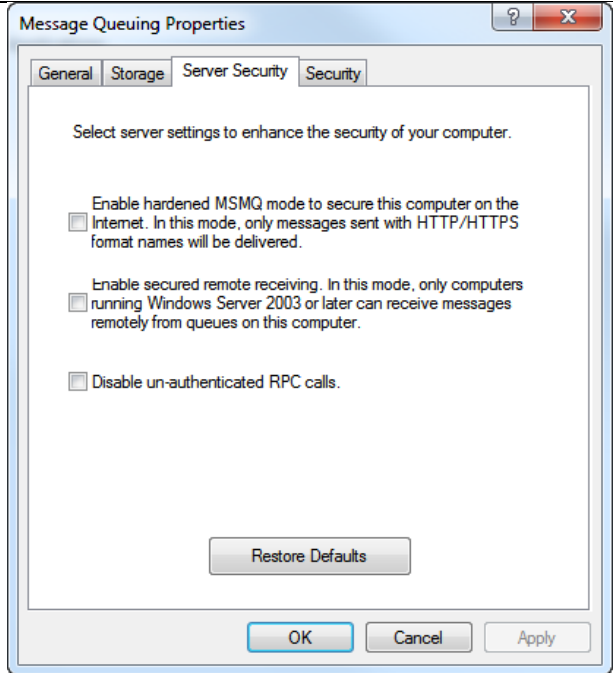

<p>13. In 'Domain Profile' and 'Private profile' use the dropdown box to select 'Allow' for Inbound connections'.</p>	
---	--

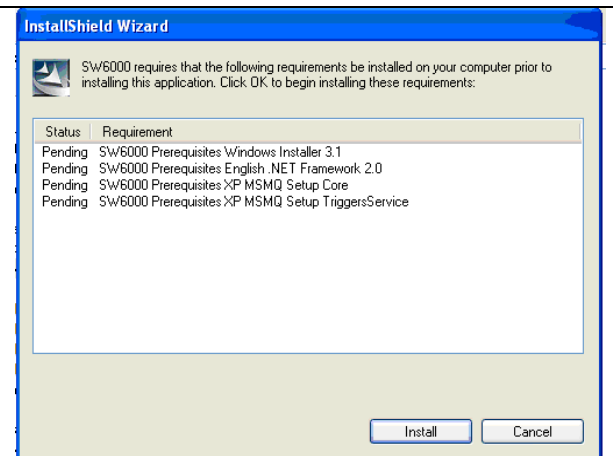

#### 4.2.4 Message Queuing settings

If the system shall run with firewall active the following setting must be done on all PC's in the system.

<p>14. Open 'Control Panel\All Control Panel Items\Administrative Tools\Computer Management'.</p> <p>Expand 'Services and Application' and right click on 'Message Queuing' and select 'Properties'.</p>	
--	--

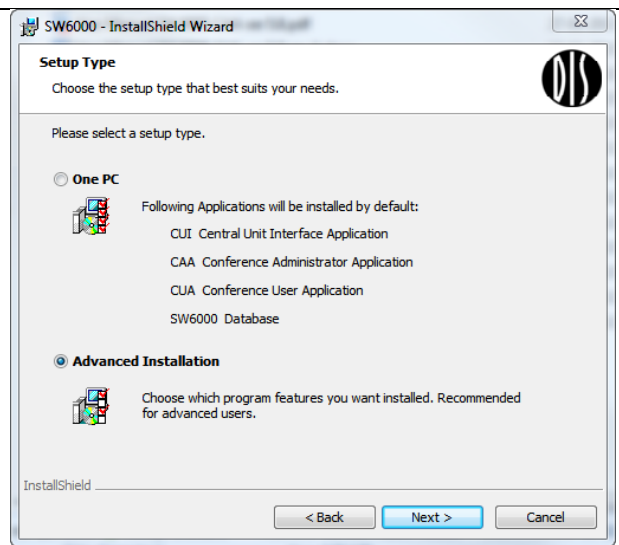

<p>15. Select the tab 'Server Security' and un-select 'Disable un-authenticated RPC calls'</p>	 <p>The screenshot shows the 'Message Queuing Properties' dialog box with the 'Server Security' tab selected. The 'Security' sub-tab is also active. It contains three checkboxes: 'Enable hardened MSMQ mode to secure this computer on the Internet. In this mode, only messages sent with HTTP/HTTPS format names will be delivered.' (unchecked), 'Enable secured remote receiving. In this mode, only computers running Windows Server 2003 or later can receive messages remotely from queues on this computer.' (unchecked), and 'Disable un-authenticated RPC calls.' (unchecked). There are 'Restore Defaults', 'OK', 'Cancel', and 'Apply' buttons at the bottom.</p>
--	---

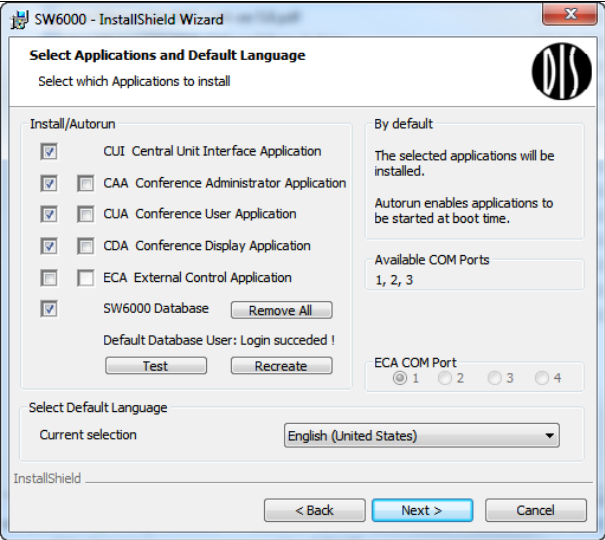

#### 4.2.5 Installing SW 6000

<p>16. Insert the CD with the 'SW 6000' Software in the CD-ROM drive in the PC.</p> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Important:</b> If the software is downloaded from the DIS web site the folder 'SW 6000 Installation' must be copied to C:\ before the installation is started and the installation must be started from the copied folder (C:\SW 6000</p> </div> <p>Click on the Setup.exe in the 'SW 6000 #Installation' folder on the CD.</p> <p>'The install Shield Wizard' will automatically show a list of 'Prerequisites' required for running SW 6000</p> <p>Click 'Install' and continue clicking 'Install' until you are asked if you want to install the SW 6000 Applications.</p>	 <p>The screenshot shows the 'InstallShield Wizard' dialog box. It states: 'SW6000 requires that the following requirements be installed on your computer prior to installing this application. Click OK to begin installing these requirements:'. Below this is a table with two columns: 'Status' and 'Requirement'.</p> <table border="1"> <thead> <tr> <th>Status</th> <th>Requirement</th> </tr> </thead> <tbody> <tr> <td>Pending</td> <td>SW6000 Prerequisites Windows Installer 3.1</td> </tr> <tr> <td>Pending</td> <td>SW6000 Prerequisites English .NET Framework 2.0</td> </tr> <tr> <td>Pending</td> <td>SW6000 Prerequisites XP MSMQ Setup Core</td> </tr> <tr> <td>Pending</td> <td>SW6000 Prerequisites XP MSMQ Setup TriggersService</td> </tr> </tbody> </table> <p>At the bottom right, there are 'Install' and 'Cancel' buttons.</p>	Status	Requirement	Pending	SW6000 Prerequisites Windows Installer 3.1	Pending	SW6000 Prerequisites English .NET Framework 2.0	Pending	SW6000 Prerequisites XP MSMQ Setup Core	Pending	SW6000 Prerequisites XP MSMQ Setup TriggersService
Status	Requirement										
Pending	SW6000 Prerequisites Windows Installer 3.1										
Pending	SW6000 Prerequisites English .NET Framework 2.0										
Pending	SW6000 Prerequisites XP MSMQ Setup Core										
Pending	SW6000 Prerequisites XP MSMQ Setup TriggersService										

17.	After installing the 'Prerequisites', the setup program is preparing the InstallShield wizard.	<p>The screenshot shows the 'SW6000 - InstallShield Wizard' window. The title bar says 'SW6000 - InstallShield Wizard'. The main area has a blue background with a white sailboat icon. The text reads: 'Preparing to Install... SW6000 Setup is preparing the InstallShield Wizard, which will guide you through the program setup process. Please wait.' Below this, it says 'Extracting: SW6000.msi' with a green progress bar. A 'Cancel' button is at the bottom right.</p>
18.	After installing the 'Prerequisites', the installation wizard continues by installing the SW 6000 Applications Click 'Next'	<p>The screenshot shows the 'SW6000 - InstallShield Wizard' window. The title bar says 'SW6000 - InstallShield Wizard'. The main area has a dark blue background with a white circular logo containing the letters 'DIS'. The text reads: 'Welcome to the InstallShield Wizard for SW6000. The InstallShield(R) Wizard will install SW6000 on your computer. To continue, click Next.' Below this, it says 'WARNING: This program is protected by copyright law and international treaties.' At the bottom, it says 'A SHURE Company'. There are buttons for 'Show the Installation manual', '&lt; Back', 'Next &gt;', and 'Cancel'.</p>
19.	Accept the License Conditions and click 'Next'  <i>INFO: The 'SW 6000 Database' option has to be un-selected when installing the SW 6000 software on all other PCs in the system</i>  <i>Select only the 'SW 6000 Database' on a PC, where the 'SQL Server 2008' has been installed</i>	<p>The screenshot shows the 'SW6000 - InstallShield Wizard' window. The title bar says 'SW6000 - InstallShield Wizard'. The main area has a white background with a black circular logo containing the letters 'DIS'. The text reads: 'License Agreement. Please read the following license agreement carefully.' Below this, it says 'Software License Agreement. Please read the following terms and conditions carefully. Use of the software provided with this agreement acknowledges that you have read this agreement, understand it and accept the terms of this agreement. If you do not agree to the terms of this agreement, do not use this software.' Below this, it says 'End-user License Agreement for DIS Software. Important - read carefully.' There are two radio buttons: 'I accept the terms in the license agreement' (selected) and 'I do not accept the terms in the license agreement'. A 'Print' button is to the right. At the bottom, there are buttons for '&lt; Back', 'Next &gt;', and 'Cancel'.</p>

20. The installation gives two choices 'One PC' installation and 'Advanced Installation'.  
Select 'Advanced Installation' and click 'Next'

<p>21. <b>CUI</b></p> <p><u>Select the CUI</u> if you are installing on the PC where you previous has made a “One PC” installation or you are making a new installation on a PC, where the SW 6000 database shall be installed.</p> <p><u>Un-select the CUI</u> if you are installing CUA, CAA, CDA or ECA on another PC in a multi-PC system.</p> <p><b>CAA, CUA and CDA</b></p> <p>Select one or more of the following applications: CAA, CUA, CDA or ECA all depending on your system design.</p> <p><b>ECA</b></p> <p>Select the application ECA depending on your system design. Select the COM port, you want to use with the ECA.</p> <p><b>SW 6000 Database</b></p> <p><u>Select the SW 6000 Database</u> if you want to add one or more additional databases to the PC/Server where the SQL Server 2008’ has been installed or you are installing a PC/Server with a new database.</p> <p><u>Un-Select the ‘SW 6000 Database’</u> when installing on all other PC’s in the system</p> <div data-bbox="268 1171 761 1283" style="border: 1px solid black; padding: 5px;"> <p><b>INFO:</b> The ‘SW 6000 Database’ option has to be un-selected when installing the SW 6000 software, if a ‘SQL Server 2008’ has been installed on other PCs in the system</p> </div> <p>Select only the ‘SW 6000 Database’ on a PC, where the ‘SQL Server 2008’ has been installed</p> <p><b>Select Default language</b></p> <p>Select the default language only if you are making a new database installation</p> <div data-bbox="276 1563 769 1646" style="border: 1px solid black; padding: 5px;"> <p><b>IMPORTANT:</b> The default language can only be selected during installation and cannot be changed after the installation is completed</p> </div> <p><b>Autorun</b></p> <p>Tick the applications, which has to start-up automatically (Autorun) every time the PC is started</p> <p>Click ‘Next’ Click ‘Next’</p>	
--	--

22. If 'SW 6000 Database' was selected in the selection in previous screen the 'Database Settings' will show.

### Database Engine

The database server installed together with SW 6000 is MS SQL Express. Select 'MS SQL Server' is this type of database server is in use.

### Databases

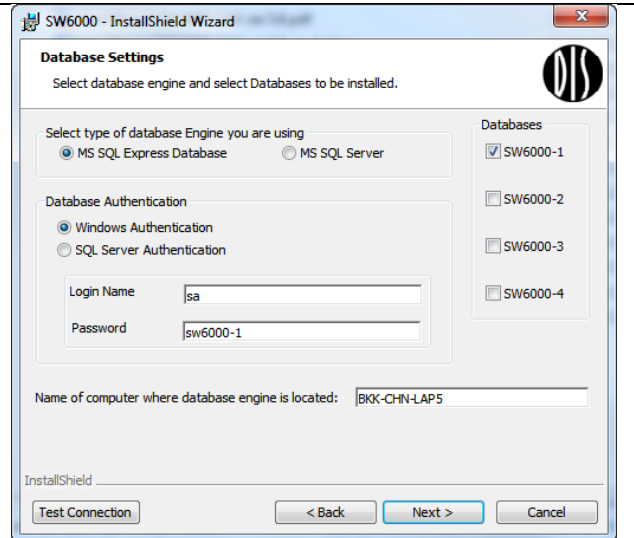

Select 'SW 6000-1' as the database to be installed.

**INFO:** The SW 6000 system can handle up to 4 databases in each database engine. The names of the databases are limited to 'SW6000-1', 'SW6000-2', 'SW6000-3', and 'SW6000-4'.

For most installations only the SW6000-1 database is needed.

**IMPORTANT:** Remember the name of the database(s) selected as well as the name of the computer as this information is needed when installing the SW 6000 Software on other PC's

Click 'Next'

23. **Set Database Connection**

This page sets the type of database connection string to be used.

Create SQL Server Express connection is default

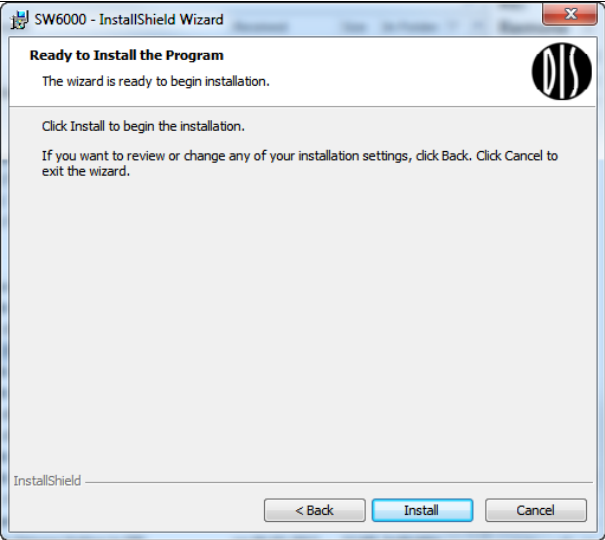

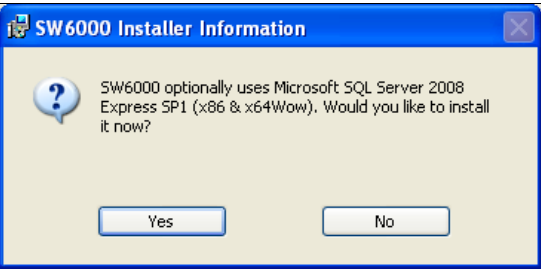

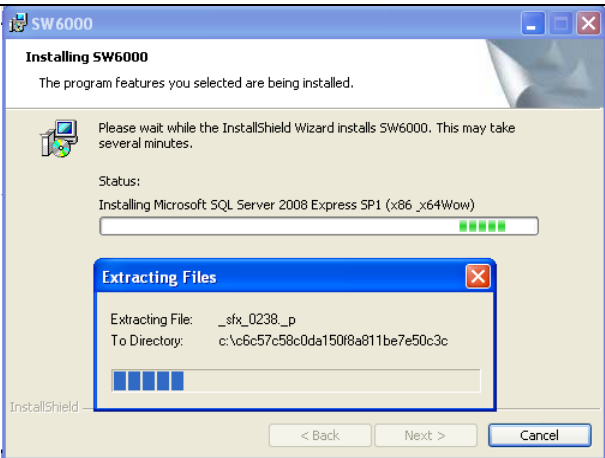

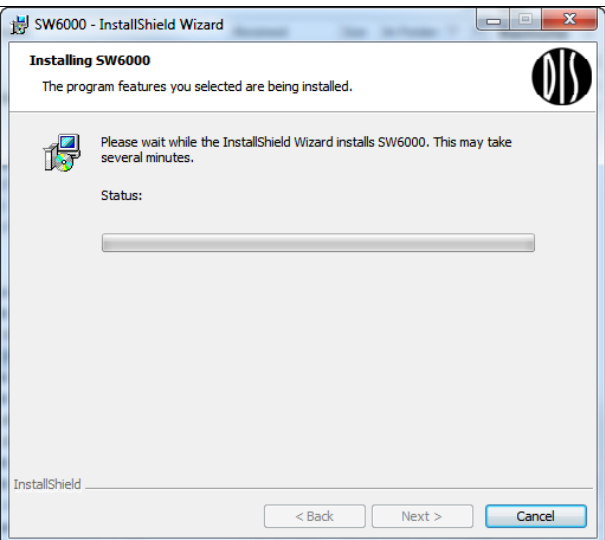

Create SQL Server connection shall be selected if a 'MS SQL Server' is in use.

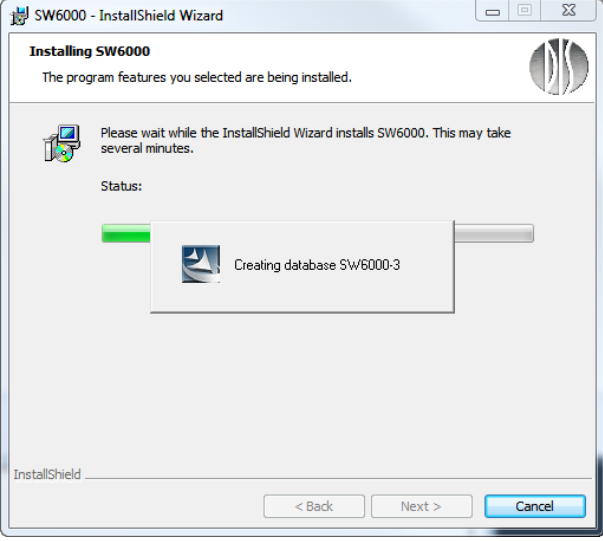

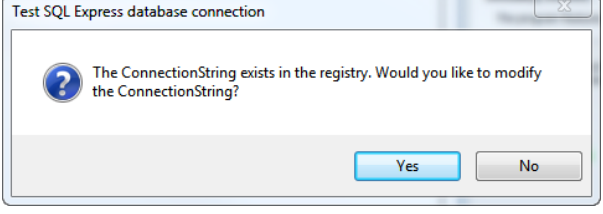

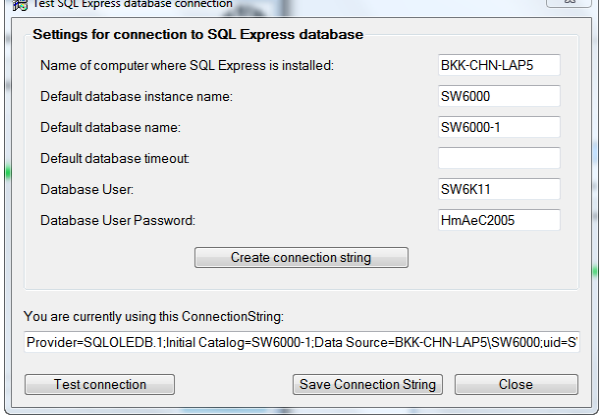

Create Database Connection's might be checked if the option to connect to multiple databases shall be configured. This setting can be done later in the CAA application.

Details on hall definition settings are present in the section '7.4 Creating Database Connections'.

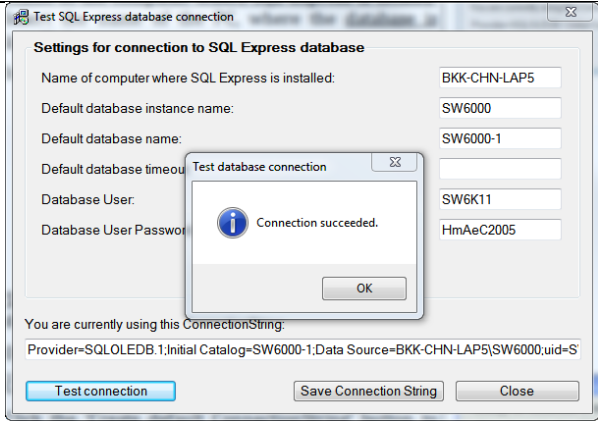

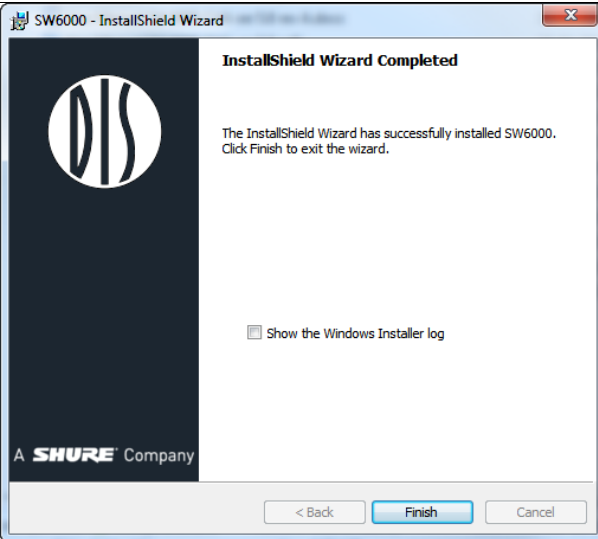

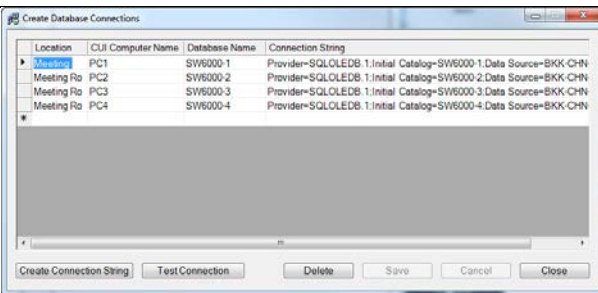

Click 'Next' to continue.

24.	Click 'Install' to install the options selected	 <p>The wizard is ready to begin installation.</p> <p>Click Install to begin the installation.</p> <p>If you want to review or change any of your installation settings, click Back. Click Cancel to exit the wizard.</p> <p>InstallShield</p> <p>&lt; Back   Install   Cancel</p>
25.	<p>If you selected 'SW 6000 Database' in item 16.</p> <p>If no SQL server is installed previously you will be asked to confirm if you want the SQL server 2008 Express to be installed.</p> <p>Click 'Yes'</p>	 <p><b>SW6000 Installer Information</b></p> <p>SW6000 optionally uses Microsoft SQL Server 2008 Express SP1 (x86 &amp; x64Wow). Would you like to install it now?</p> <p>Yes   No</p>
26.	The SQL 2008 Server Express is now being installed.	 <p><b>SW 6000</b></p> <p><b>Installing SW6000</b></p> <p>The program features you selected are being installed.</p> <p>Please wait while the InstallShield Wizard installs SW6000. This may take several minutes.</p> <p>Status: Installing Microsoft SQL Server 2008 Express SP1 (x86_x64Wow)</p> <p><b>Extracting Files</b></p> <p>Extracting File: _sfx_0238_p To Directory: c:\c6c57c58c0da1508a811be7e50c3c</p> <p>InstallShield</p> <p>&lt; Back   Next &gt;   Cancel</p>
27.	The SW 6000 Applications are then being installed	 <p><b>SW6000 - InstallShield Wizard</b></p> <p><b>Installing SW6000</b></p> <p>The program features you selected are being installed.</p> <p>Please wait while the InstallShield Wizard installs SW6000. This may take several minutes.</p> <p>Status:</p> <p>InstallShield</p> <p>&lt; Back   Next &gt;   Cancel</p>

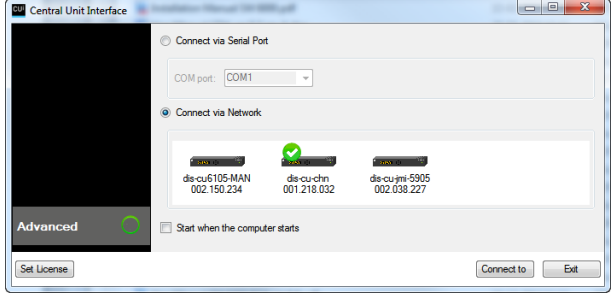

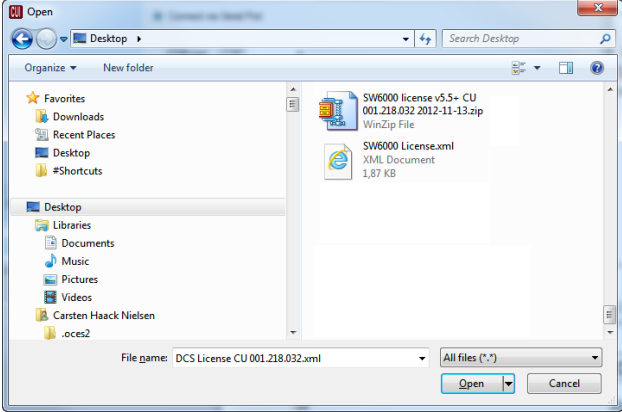

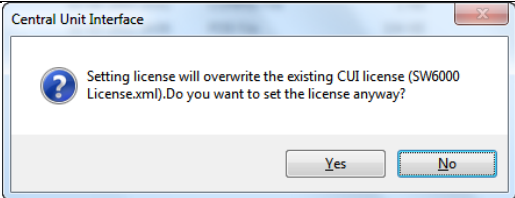

28.	<p>The database(s) are created</p>	
29.	<p>If a connection string is present, you will be asked if you want to modify the connection string.  <u>Click No</u> if you do not want to change  <u>Click Yes</u> if you want to modify the connection string or just want to check.</p>	
30.	<p>If no 'Connection String' was present or you selected 'Yes' to modify, the 'Test SQL Express database connection' options are shown.</p> <div data-bbox="209 1137 738 1234" style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Info:</b> The 'connection string' is the 'address' the application uses to connect to the database</p> </div> <p>Use default or change those fields if needed:  <u>'Name of the computer where SQL Express is located'</u> Insert the name of the PC, where the database is installed.  In the example the name is 'bkk-lap-chn5'</p> <div data-bbox="209 1503 738 1738" style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Important:</b> When installing the applications CAA, CUA, ECA or CDA on other PCs than the one where the database is installed the 'Name of the computer...' and 'Default database name' has to be filled in. The name of the computer is the computer, where the SQL database server is installed.</p> </div> <p><u>'Default database name'</u> In the example the name is the default 'SW6000-1'  Other settings are normally not changed.</p>	

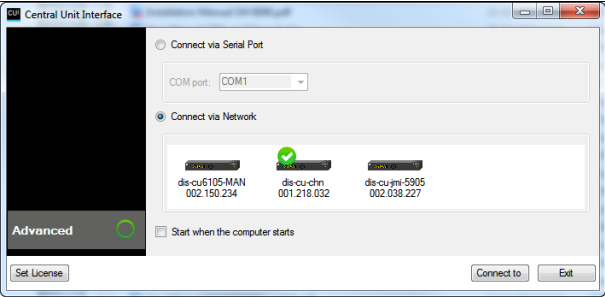

<p>31. Create, Test and Save Connection String:</p> <p>Click the 'Create default ConnectionString' button to generate the connection string according to the parameters provided.</p> <p>The resulting 'ConnectionString' will be displayed in the textbox at the bottom of the window</p> <p>Click 'Test connection'.</p> <p>The message 'Connection succeeded' will show.</p> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Important:</b> This test must succeed. If the test does not succeed then the name of the computer or the default database name might be wrong.</p> </div> <p>Click 'Save ConnectionString'</p> <p>Click 'Close'</p>	
<p>32. Click 'Finish' to complete the installation.</p> <p>Shortcuts to the application have now been created at the 'Desktop', the 'Start menu' and in the 'Startup folder' for automatic startup of the application.</p>	
<p>33. If you have selected 'Create Database Connection's' previously, the 'Create Database Connection's' window will appear.</p> <p>For details in how to setup database connections please refer to the section '<b>Error! Reference source not found. Error! Reference source not found.</b>'.</p>	

## 5 After installation of SW 6000 Software

### 5.1 Starting the CUI for the first time

<p>34. After the SW 6000 has been installed a shortcut to the CUI application have now been created at the 'Desktop', in the 'Start menu' and in the 'Startup folder' for automatic startup of the application.</p> <p>When starting the CUI for the first time the CUI configuration windows open.</p> <p>Select..</p> <p><u>Connect via Serial Port</u> if your CU is a CU 6005, CU 6010 or CU 6011, by selecting the COM port, where the CU is connected.</p> <p><u>Connect via Network</u> if your CU is a CU 6105 or CU 6110, by selecting the appropriate CU in the list window.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Important:</b> The list window will only list the CU's if 'Apple - Bonjour for Windows' is installed. If 'Bonjour' is not installed please refer to point 39 in the section '7.1 Advanced setting in the CUI' and use the CU IP address to identify the CU.</p> </div>	
<p>35. Click 'Set License'</p> <p>A browser window will open. Browse to the 'SW 6000 License' file.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Info:</b> For more information about the SW 6000 License file, please refer to section '0 License file'.</p> </div>	
<p>32 Click 'Yes' to insert the license file</p>	

36.	<p>Click 'Connect to'</p> <p>The CUI will now start connecting to the selected CU.</p> <div style="border: 1px solid black; padding: 10px; margin: 10px 0;"> <p><b>Info:</b> The selections made are used next time the CUI is started, where the 'CUI Configuration window' will not open.</p> <p>If a new selection has to be made, the shortcut 'Configure CUI' in the Start menu must be used.</p> <p>For 'Advanced' option please refer to later section</p> </div>	
37.	<p>When the CUI is started an Icon is visible in the taskbar.</p> <p>For details please refer to 'Advanced options in later section.</p>	

## 6 Getting started

The system has now been installed successfully.

The following sections describe the necessary steps to get started. However please refer to the CAA User Manual, the CUA User Manual and CDA User Manual for a throughout description of how to use the SW 6000 System.

### 6.1 Steps

1. Connect the CU 6005 or CU6011 Central Unit to the PC, where the CUI is installed, with a RS232 cable or connect with TCP/IP if CU 6105 or CU 6110 are used.
2. Turn on the CU with all units (Delegate Units, Chairman Units, AO units etc.) connected.
3. Start the CU Interface Application (CUI).

If the CUI version is not compatible with the database you will be advised to start the CAA to automatically update the database. You will then have to restart the CUI.

When the CUI Application starts to communicate with the CU it will receive information for all units connected to the CU. The CUI Application will then create one seat in the Seat assignment table for each Chairman Unit and Delegate Unit, numbering the seats, starting at one and counting upwards.

**Hint:** To make is easier later to assign delegates to seats and to make Mimic diagrams the seats should be renumbered to give a more logical order.

Room	Seat #	Serial #	Seat Type	Use Serial #	User Type	Computer Name
1	2	000.013.027	DM		Chairman	PC1
1	3	000.029.173	DM		Delegate	
1	100	000.000.000	Technician		Technician	bkk-chn-lap

Figure 6.1-A Generate Connection String

4. Start the Conference Administration Application (CAA). If needed the Database will be upgraded automatically.
5. Select the "Setup/Equipment/Conference Units". Assign computer names for each of the seats where there is a PC on the network that will run the Conference User Application (CUA).
6. Select the Mimic screen from the "Setup/Configuration/Mimic Configuration" and create a new Mimic diagram.

Creating a Mimic diagram requires the user to import a bitmap showing the room or hall as a background image and then to import all seats onto the Mimic

diagram and position the coloured dots representing a microphone or seat.

7. Select the User Type screen from the "Setup/User Type" and create additional user types (e.g. Vice Chairman) to be used when creating the list of Delegates and to be used as defaults for the seats when no one is logged in. The user types that are created during installation can either be modified or deleted (the Chairman and Delegate user type can be modified but not deleted).

The User Type determines individual microphone settings, screens, buttons and functions that will be available when a user is logging into the CUA.

A User Type is also associated with each seat to determine the settings that must apply as default when no one is logged in.

8. Select the “Setup/Equipment/Conference Units” and assign a user type to each of the seats to be used as a default when no one is logged in.

Room	Seat #	Serial #	Seat Type	Use Serial #	User Type	Computer Name
1	2	000.013.027	DM		Chairman	PC1
1	3	000.029.173	DM		Delegate	
1	100	000.000.000	Technician		Technician	bkk-chn-lap

Figure 6.1-B Generate Connection String

9. Select the “Delegates” screen and type in information for the various users of the system.

It is possible to enter any additional information required for delegates in up to four customisable fields.

10. Select the “Setup/Configuration/Delegate List Configuration” and configure the width of the various fields on the delegate lists.
11. Select the “Setup/Language/Languages” and create additional system languages if

needed (English is created during installation).

12. Select the “Setup/Language/Labels” to create translations for the languages that have been added. If some or all labels are not translated then the default language translation (English) for a particular label will be used.
13. Select the “Setup/Language/Labels” and chose the English tab and select label 40 and change “Plenary Hall” to a description, which applied for your installation

40	Plenary Hall	DIS Seminar room
----	--------------	------------------

Figure 6.1-C Chan label for room description

14. Select the “Message” screen and create messages.
15. Select “Setup/Configurations/CDA Configuration and change (if needed) Font Size, Colours etc. for the various CDA screens available.
16. Select “Conference”
17. Add a conference
18. Fill in a proper name for the conference.
19. If chip cards or login using code are not in use select “Prepared Delegate List”.

20. Select the preferable “Microphone Operation Mode” and preferable “Voting Parameters” (both “Microphone Operation Mode” and “Voting Parameters” can be changed at any time during the conference”
21. Change Start and Stop date if needed.
22. Click update
23. Select “Delegate List
24. Select the delegate who is to be placed in Seat 1 and click >>

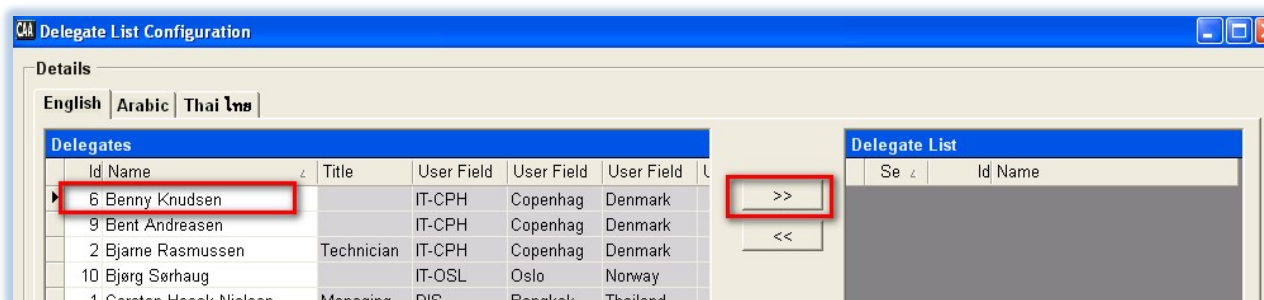

Figure 6.1-D Generate Connection String

25. Select the delegate who is to be placed in Seat 2 and click >>. Continue until delegates are placed in all seats
26. Click "Hide"

Figure 6.1-E 'Hide' delete database

27. Select for each Delegate the User Type, which shall apply for the delegate for this conference.

Figure 6.1-F Change User Type in Delegate List

28. Click Update and close the Delegate List screen
29. Select Agenda and fill in an Agenda for the Conference
30. Select Options and select the default options for this conference

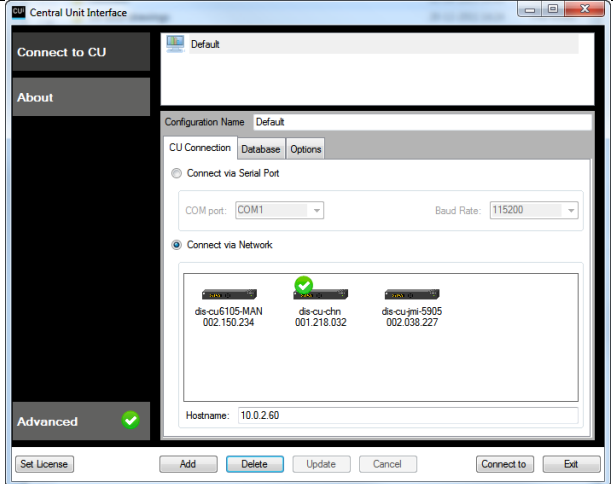

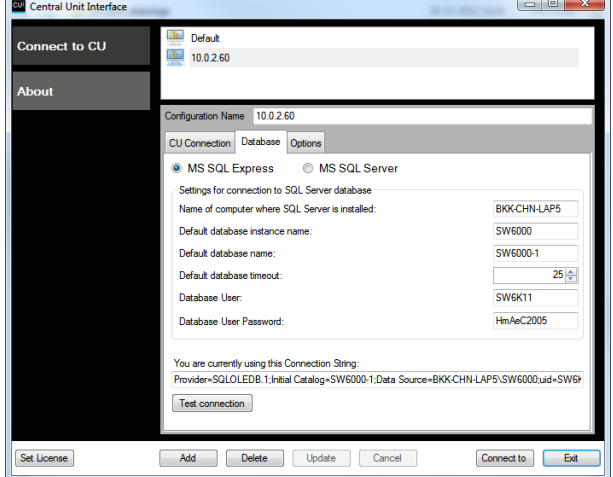

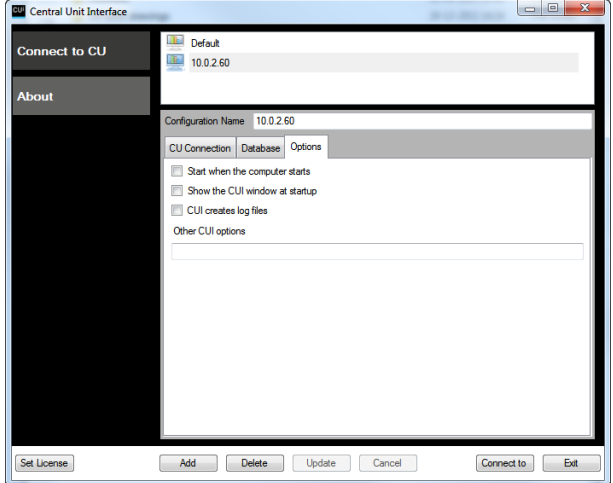

31. Click Update

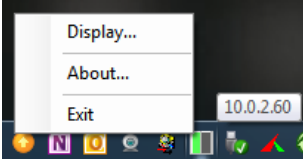

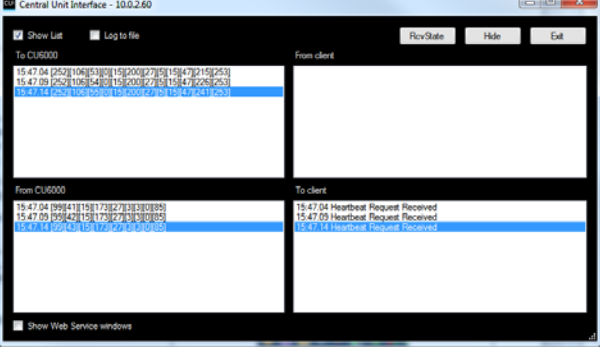

**Hint:** If the conference created is supposed to be the default for future conferences then click "Save as Default"

The system is now ready for use, however it is strongly recommended to read the User Manuals for Applications.

## 7 Advanced Settings

### 7.1 Advanced setting in the CUI

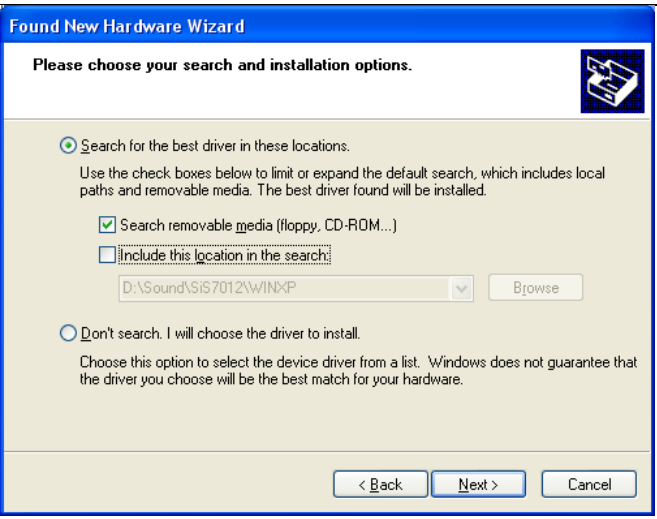

<p>38. When activating the shortcut 'Configure CUI' in the Start menu the CUI interface opens.</p> <p>When 'Advanced' it ticked more configuration options in three tabs will be available.</p> <p><b>CU Connection</b></p> <p><u>Configuration Name</u> Different CUI configurations can be made. If a configuration is Added, a shortcut is created on the desktop with the name of the configuration.</p> <p><u>Hostname</u> The hostname or IP address can be typed into this field to create a connection, where the CU is not turned on.</p>	
<p>39. <b>Database</b></p> <p>CUI connections to different databases can be setup.</p> <p>Click 'Add' and give the new configuration a name and make the settings as needed. Click 'Update' to save the new configuration.</p> <p>Previous configurations can be changed by selecting the configuration in the top window, then making the changes and click 'Update'</p>	
<p>40. <b>Options</b></p> <p>The following options are available:</p> <ul style="list-style-type: none"> <li>• Start when the computer starts</li> <li>• Show the CUI window at startup</li> <li>• CUI creates log</li> </ul> <p>A text field is available for additional options</p>	

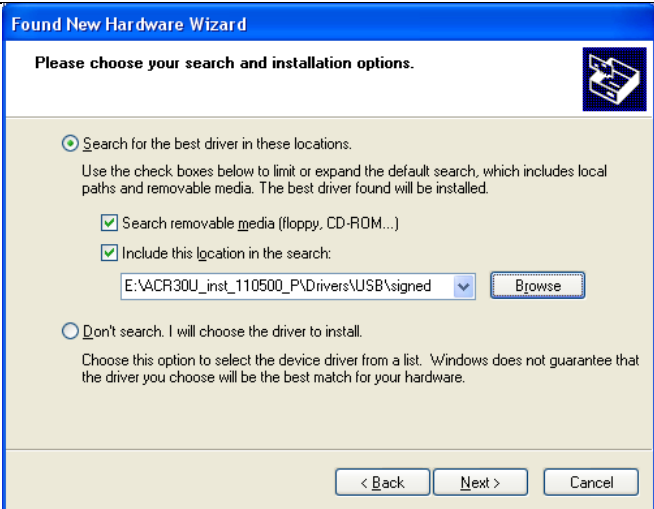

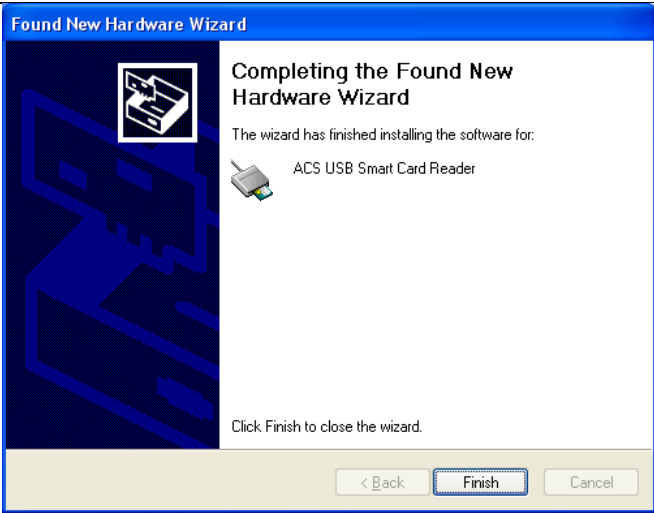

41.	<p><b>When the CUI is started an Icon is visible in the taskbar.</b></p> <p><b>Right-clicking the icon brings the option menu.</b></p>	
42.	<p><b>Display</b></p> <p><b>Show messages to/from the central unit</b></p>	
43.	<p><b>About</b></p> <p><b>Shows if the 'License File' is verified and connection details</b></p>	

## 7.2 Installing the CP 6001 Chip Card Programmer

The CP 6001 Chip Card programmer is used for programming and reading DIS chip cards. To install the programmer follow the instructions:

44.	<p>Connect the programmer to an available USB port on the PC, where a CAA application is installed.</p> <p>Your windows operating system will automatically detect the CP 6001 by showing the 'Found New Hardware Wizard'.</p> <p>Click 'No, not this time' to continue.</p>	
45.	<p>Insert the SW 6000 CD-ROM in the CD drive</p> <p>Select 'Search removable media (floppy CD-ROM...)</p> <p>Click 'Next'.</p> <p>If the 'Windows Installer' cannot find the driver, please proceed to step 5.</p>	
46.	<p>The driver has been installed and the CP 6001 Chip Card Programmer is now ready to use.</p>	
47.	<p>If the 'Windows Installer' cannot find the driver, please click the "Include the location in the search" and click 'Browse'</p>	

48.	<p>Include the driver folder as shown (to be found in the SW6000 CD-ROM in the folder: 'Miscellaneous\Driver for DCS 600x Chip card programmers').</p> <p>Select the folder 'ACR38U_inst_111108_P'</p> <p>Click 'OK'.</p>	
49.	Click 'Next'.	
50.	<p>The driver has been installed and the CP 6001 Chip Card Programmer is now ready to use.</p>	

## 7.3 Customer Logo

The DIS logo in the CUA application can be exchanged with a customer logo.

Do the following:

1	<p>Open the file "CUA logo background.bmp" with a graphics-editing program like 'Paint'.</p> <p>The file is found on the SW 6000 CD-ROM in the folder 'SW6000 Accessories\Customer logos'.</p> <p>The image in the file has the same colour as the default background for the CUA application.</p> <p>The image size is 214x162 pixels and the new logo must have the same image size.</p>
---	--

2	Open a <u>new</u> instance of 'Paint' and open the file with the customer logo.
3	Select the part of the logo which shall be used and select 'copy'.
4	Insert the selected part of the customer logo into the background file and edit the colours if needed.
5	Save the file as: <b>logo.bmp</b> (24 bit)
6	Move or copy the just created logo file to the same directory where the CUA executable is placed, normally 'C:\Program Files\DIS\Conference User Application'.
7	When starting the CUA application now the customer logo has replaced the DIS logo

## 7.4 Creating Database Connections

If your CUA or CAA application on the PC shall have access to more databases you must check the checkbox 'Create Hall Definitions' when prompted during installation of the CUA, CAA.

During the installation of SW 6000 software, if the 'Create Hall Definitions' checkbox is selected, it is time to set the hall definitions, the following window will appear.

Figure 7.4-A Create Database Connection

Inside the window there is a grid with 4 columns:

- **Location** A description of the location of the computer, where the database is installed.
- **CUI Computer Name** The name of the computer, where the CUI is installed (and database).
- **Database Name** A name identifying the database for the user.
- **ConnectionString** The string, which the CU Interface uses to connect to the specified database. Pressing the 'Create ConnectionString' button at the bottom of the window creates the ConnectionString.

There are 6 buttons at the bottom of the window.

1. 'Delete' button will delete the current row in the grid.
2. 'Save' button will save all row present in the grid to Windows registry.
3. 'Cancel' button will cancel any changes made to the Database Connections.
4. 'Close' button will close the window.
5. 'Create ConnectionString' button is used to create a ConnectionString for the current row on the grid. When this button is pressed, a new window 'Figure 7.4-B Generate Connection String' pops up.
  - a. Data Source Type - Select if the database is SQL Express or SQL.

- b. Name of the computer where SQL Server is installed - Insert the name of the Computer running the CUI and database

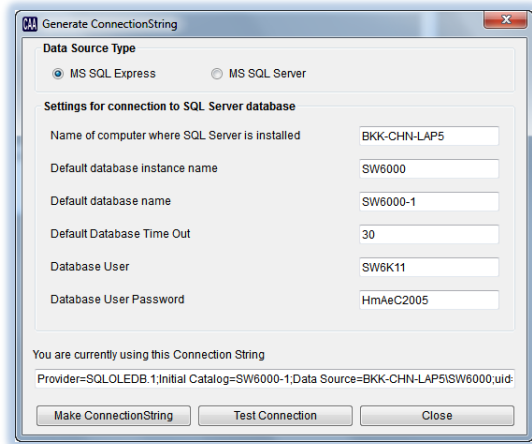

Figure 7.4-B Generate Connection String

- c. Default database instance name - The default value is SW6000
- d. Default database name - The Database Name is the name of the database we wish to connect. The names are limited to SW6000-1, SW6000-2, SW6000-3, and SW6000-4.
- e. Default database time out - The default database timeout is the timeout value for the connection established

- f. Database user - Default value used during installation of SW 6000
- g. Database user password - Please note if the database is MDSE then the password has to be changed to HmAeC2k. For SQL 2008 Server the password is HmAeC2005
- i. When the selections has been made click 'Make ConnectionString'.to create the connection string. Use the 'Test Connection' button to test the connection string.
- ii. Close the window and proceed filling in information and create connection string for all the connections.
- h. Click 'Make' to generate the connection string.
- i. 'Test Connection' button will validate the Connection String created
- j. Click 'Close' button to close the window.

'Test Connection' button will validate whether the 'Connection String' on the current row in the grid can be used to successfully connect to the database.

## 7.5 License file

A licence file is needed for running the SW 6000 Software. Even if it might be possible to run functionality and/or application which are not licensed for, it is illegal in accordance with the License Conditions.

A licence file includes the serial number of the CU 6005, CU 6010, CU 6011, CU 6195 or CU 6110 and is delivered from DIS in a zipped format like this example 'SW6000 license v5.5 CU xxx.xxx.xxx 2012-05-08.zip', where xxx.xxx.xxx is the serial number of the CU for which the licence file is created.

Before the license file can be used it must be unzipped. The name of the unzipped license file is **SW6000 License.xml** and must not be changed.

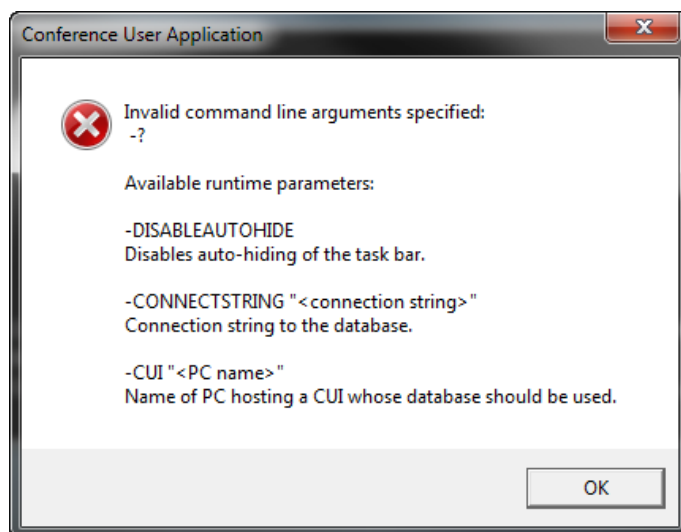

**Note:** The licence file "SW6000 License.xml" is located in the CUI execute directory (C:\Program Files\ DIS\CU Interface Application).

If no license file is found, the license file is invalid or the license is expired this will be displayed using a message box on the PC running the CUI interface and a system message will also be sent to CUA computers that have system message monitoring capabilities.

**Important:** Connection to the CU is needed for the license to be checked and hence the operation of said SW. If the CU is not connected and therefore the licence file is not checked the CAA can be started and access the Database info such as the seat table but all of the licensed features would be greyed out and unavailable.

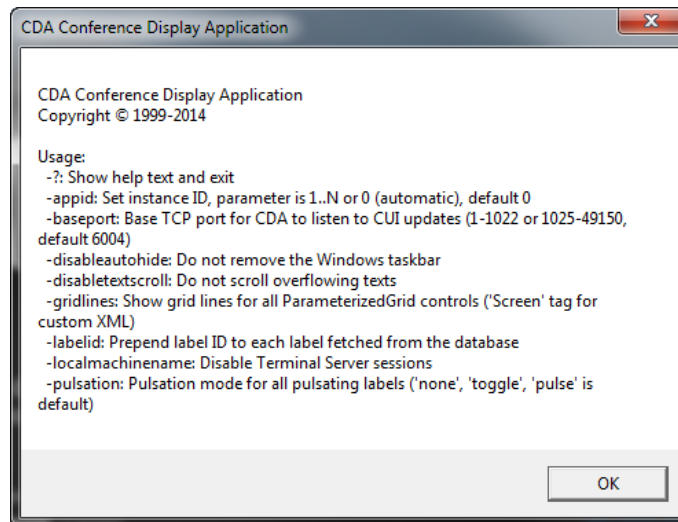

## 7.6 Advanced settings CUA, CDA

### 7.6.1 Command line parameters for the CUA

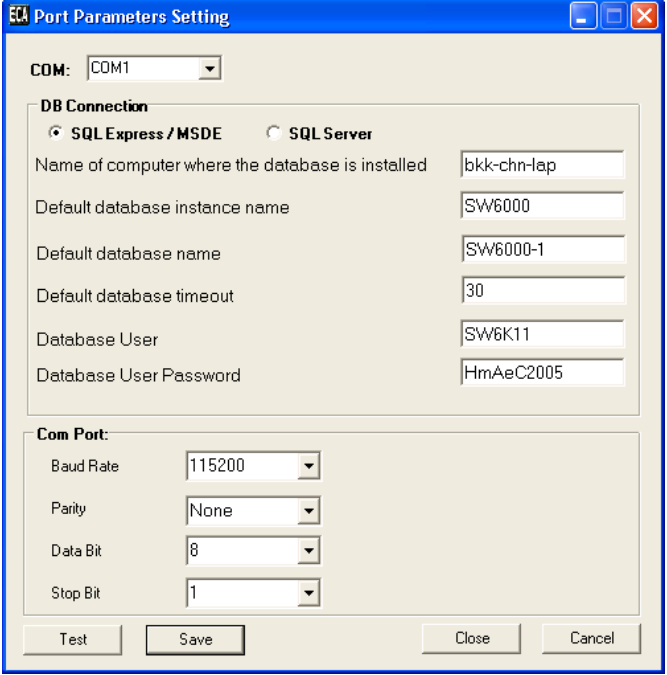

-CONNECTSTRING "connectstring"	Use this parameter to specify the database the CUI shall connect to. An example of a valid 'connectstring' entry is Provider=SQLOLEDB.1;Initial Catalog=SW6000-1;Data Source=bkk-chn-lap\SW6000;uid=SW6K11;password=HmAeC2005;Timeout=30;
-DISABLEAUTOHIDE	Will not hide taskbar
-CUI 'PC-name'	If this parameter is applied the CUA or CDA will automatic change connection to the database the CUI on the PC specified in the parameter is starting up on.
-LOWRESOLUTION	CUA starts up in Layout 1 with min. resolution of 1024 x 768
-MEDIUMSHORTRESOLUTION	CUA starts up in Layout 2 with min. resolution of 1280 x 768
-MEDIUMRESOLUTION	CUA starts up in Layout 3 with min. resolution of 1280 x 800
-HIGHRESOLUTION	CUA starts up in Layout 4 with min. resolution of 1920 x 1080

## 7.6.2 Command line parameters for the CDA

## 7.7 Configuring the ECA

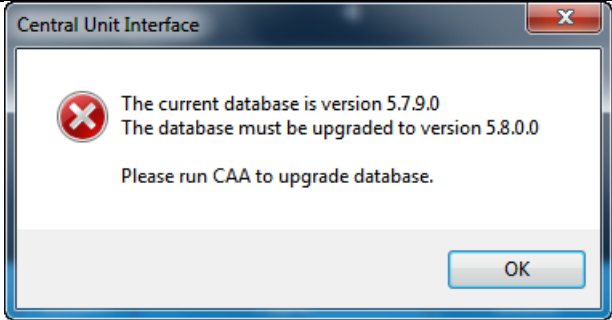

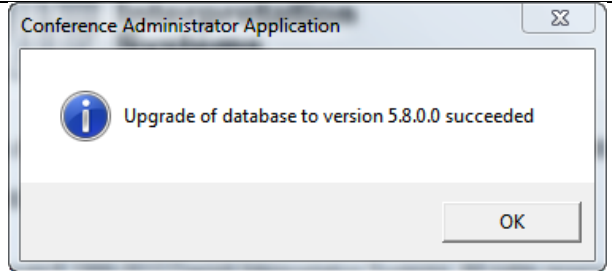

51.	After the ECA has been installed, the ECA shortcut is placed on the Desktop and in the start folder.	 <p>External Control Application</p>
52.	Click the 'ECA Interface' shortcut on the desktop	
53.	<p>When starting the 'ECA' the following window appears:</p> <p>The COM ports, which are configured, will be highlighted.</p> <p>Insert the Name of the Computer, where the database is installed</p> <p>Insert the 'Default Database name'</p> <p>Click 'Save'</p>	 <p><b>ECA Port Parameters Setting</b></p> <p>COM: COM1</p> <p><b>DB Connection</b></p> <p><input checked="" type="radio"/> SQL Express / MSDE <input type="radio"/> SQL Server</p> <p>Name of computer where the database is installed: bkk-chn-lap</p> <p>Default database instance name: SW6000</p> <p>Default database name: SW6000-1</p> <p>Default database timeout: 30</p> <p>Database User: SW6K11</p> <p>Database User Password: HmAeC2005</p> <p><b>Com Port:</b></p> <p>Baud Rate: 115200</p> <p>Parity: None</p> <p>Data Bit: 8</p> <p>Stop Bit: 1</p> <p>Test Save Close Cancel</p>

### 7.7.1 Command line parameters for the ECA

- W Show a communication window when the ECA is started. Don't use this parameter in normal use.
- COMx Specifies the COM port to use. COM1 to COM4 are valid entries. When the COM port is specified, the 'Select COM port' popup is disabled.

## 8 Upgrading from previous versions

### 8.1 Upgrade

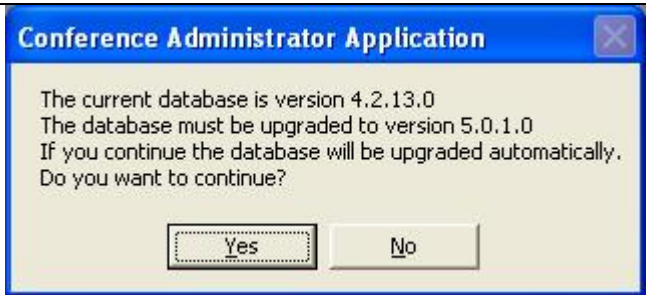

54.	Backup the Database using 'SW 6000 Backup Utility'.	
55.	<p>On each PC run the SW 6000 Installation and select Advanced Installation and select the Applications, which are installed (CUI, CUA, CAA, ECA and/or CDA) and have to be upgraded.</p> <p>Do not select 'SW 6000 Database'.</p> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Important:</b> An installed database is never 'overwritten' during an upgrade even if it is selected to be installed</p> </div>	
56.	<p>If the CUI is started after an upgrade of the Software a message, that the database shall be upgraded might appear.</p> <p>Click OK to close the message</p> <p>Close the CUI</p>	
57.	<p>Start the CAA</p> <p>Accept to upgrade the database</p> <p>Click OK to close the message and the CAA will start</p> <p>Start the CUI</p>	

### 8.2 Upgrading procedure (using old MSDE Database Server)

If you have a previous SW 6000 version already installed using the MSDE Database Server, you can upgrade as follows.

58.	Backup the Database using 'SW 6000 Backup Utility'.	
59.	<p>Remove the old installation using "Control Panel - Add or Remove Programs" in the following order:</p> <p>SW 6000</p> <p>MSDE Installation</p>	

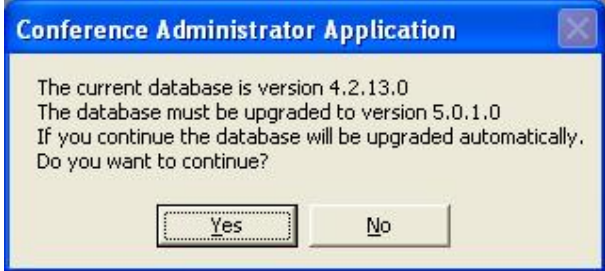

60.	Install the applications as explained in the section "Software Installation".	
61.	Restore the Database using 'SW 6000 Backup Utility'.	
62.	<p>Start the CAA.</p> <p>You will be prompted to upgrade the database when the CAA is started the first time after the installation. Accept this and the database will automatically be upgraded.</p> <p>Click 'Yes'</p>	
63.	<p>The upgrade is now completed.</p> <p>Click 'OK'.</p>	
64.	Insert a new SW 6000 License file as explained in the section "License File"	
65.	Update other PCs in the system however do not install the <b>SQL Server 2008 Express Edition &amp; SW 6000 database</b>	

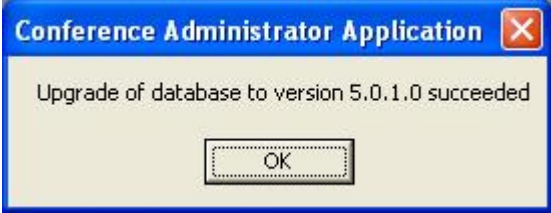

### 8.3 Upgrading procedure, change of database server

If you have a previous SW 6000 version already installed using the SQL 2005 Server

Express and want to use the SQL 2008 Server Express, you can upgrade as follows.

#### 8.3.1 Upgrading from SQL 2005 Server Express to SQL 2008 Server Express

66.	Backup the Database(s) using 'SW 6000 Backup Utility'.	
67.	<p>Double-click the 'setup.exe' in the SW 6000 Installation folder and select 'Install'.</p> <p>Select the 'Advanced Installation'.</p> <p>Select 'Remove All' to remove the database</p> <p>Accept to delete all SW6000 databases</p> <p>Enter 'sa' in the Name field and 'sw6000-1' in the password field.</p> <p>Cancel the remaining installation and Finish.</p> <p>Optionally, it is possible to remove the database using SQL Server Management Studio Express. The use of SQL Server Management Studio Express is not supported by DIS.</p>	
68.	<p>Remove the old installation using "Control Panel - Add or Remove Programs" in the following order:</p> <ol style="list-style-type: none"> <li>1. SW6000</li> <li>2. SQL 2005 Server Express</li> </ol>	
69.	Install the applications as explained in the section '4.1 'One PC' Installation or first installation in a multi-PC system'.	
70.	Restore the Database using 'SW 6000 Backup Utility'.	
71.	<p>Start the CAA.</p> <p>You will be prompted to upgrade the database when the CAA is started the first time after the installation. Accept this and the database will automatically be upgraded.</p> <p>Click 'Yes'.</p>	

72.	The upgrade is now completed. Click 'OK'	
73.	Update other PCs in the system however do not install the <b>SQL Server 2008 Express</b> on other PC's.	

## 9 Un-installing

Normally you will not need to un-install the SQL server however if an un-install is required follow the below instruction carefully:

### 9.1 Un-install SW 6000 Applications

The SW 6000 Applications can be un-installed using the windows 'Control Panel' and selecting 'Add or Remove programs'.

The name of the installation is 'SW6000'.

74.
- To un-install select 'SW6000' in the list of programs and click 'Remove'.  
  
All the applications are then removed, except the SW 6000 Database and SQL Database Server.

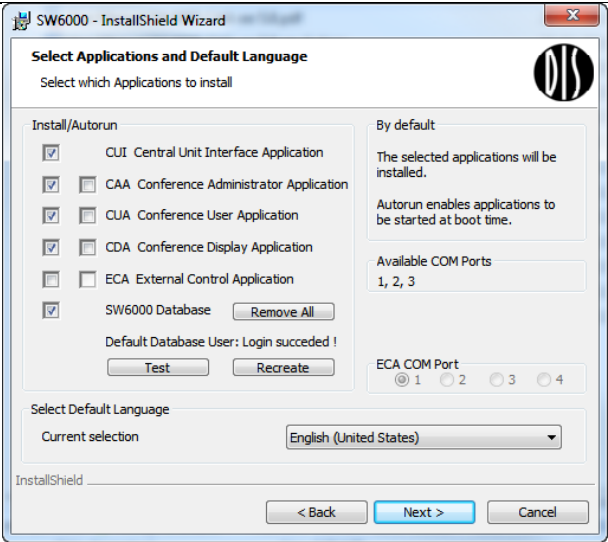

### 9.2 Un-install SW 6000 Databases

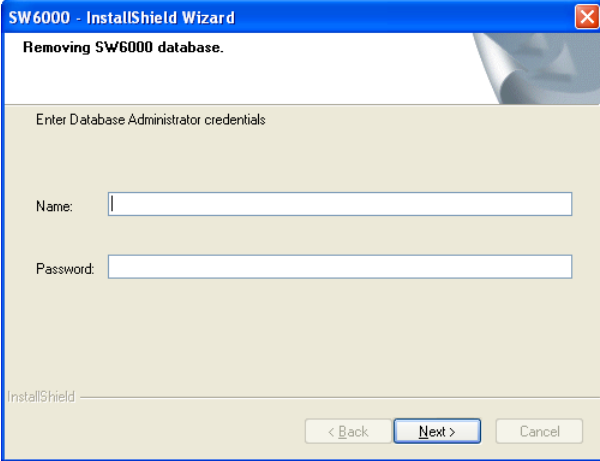

When the databases (SW 6000-1, SW 6000-2, SW 6000-3 or SW 6000-4) has been installed using the SW 6000 Setup, the databases will not be

removed, when removing the SW 6000 Application using 'Add or Remove programs'.

The Databases are removed in the following way.

75.
- Run the SW 6000 Setup program and select 'Advanced Installation'.  
  
Click 'Remove All'

<p>76. You will be asked to enter Database Administrator credentials.</p> <p>Enter 'sa' in the Name field and "sw6000-1" in the Password field</p> <p>Click 'Next'</p> <p>The SW 6000 Database is now removed.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Important:</b> Remember to make backup of the databases. When the databases are removed all conference data is lost.</p> </div>	
---	--

### 9.2.1 Problems un-installing the SW 6000 Databases

If the SW 6000 Applications have been removed before the SW 6000 databases are removed or the above procedure for removing the SW 6000 Databases fails the databases can be removed in the following way:

**Delete the folder C:\Program Files\DIS\SW6000 Database**

### 9.2.2 Un-install SQL 2008 Express Server

The 'Microsoft SQL Server' can be uninstalled using the 'Add or Remove Programs' function in the Windows 'Control Panel' as well, but unless the 'SW 6000 Databases' has already been uninstalled, do not uninstall the SQL server

After deleting the database the SQL 2008 server has to be un-installed and installed again, if SW 6000 has to be re-installed.

**Important:** Remember to make backup of the databases before deleting them. When the databases are removed all conference data is lost.

The program is displayed on the list as 'Microsoft SQL Server 2008'.

## 10 Descriptions of the more technical parts

### 10.1 Database

To use the SW 6000 applications you need a database. The database contains all data used by the application such as delegate names, microphone information etc. etc.

When installing the SW 6000 software a database will be created with initial data.

The 'SQL Database Engine' hosts all databases.

These SQL servers can host the database for SW 6000:

Microsoft SQL 2000 server, Enterprise Edition or Standard Edition

Microsoft SQL Server 2005 Express

Microsoft SQL Server 2005

Microsoft SQL Server 2008 Express

Microsoft SQL Server 2008

If you are planning to use 'Microsoft SQL Server 2008' it must be preinstalled on the computer before you install SW 6000. If you are planning to use 'Microsoft SQL Server 2008 Express' you can use the set-up on SW 6000 CD-ROM.

**'Microsoft SQL Server 2008' is not part of the SW 6000 software package.**

The data in the database is not secured in any way. If you want to secure your data, you must contact your database administrator and change the connect strings used by the applications accordingly. For a description of connects strings see Connect string.

### 10.2 Connect string

When the applications are connecting to the databases to get access to data they use a 'connect string'. This connect string identifies which database should be used by the application and how.

For the SW 6000 the connect string is located in registry key:

**HKEY\_LOCAL\_MACHINE\SOFTWARE\DIS\DCS 6000\Database\Connect string**

#### 10.2.1 Connect string for the SQL Server

For the SQL server the value of the connect string will typically have a value similar to the following: -

**Provider = SQLOLEDB.1;Initial Catalog=SW6000-1;Data Source=SQLSERVERCOMPUTER;uid=sa;**

The 'Provider' determines how the application should access the database. In this case OLEDB is used – which is installed when installing MDAC 2.6.

The 'Initial Catalog' is the name of the database to connect to; this will most likely be SW6000-1.

The 'Data Source' will be the name of the computer on which the SQL server is running.

The 'uid' is the user id to be used by the application when connecting to the database. This will most likely be the default system administrator name 'sa' but it depends on how the SQL Server is installed. If you add security to the SQL Server you might change this to more appropriate value, and for example add a password to the Connect string. If you do please note that this password will be public to anyone with access to the registry on the client-machines.
